

CONTAINER GARDENING

Create a stunning combination of color and texture. Container gardening is a fun and easy way to add that “WOW” factor to your outdoor space, plus it’s great for versatility, limited space, and simple seasonal changes.

Thriller

Typically the most striking element in the container, adding height and drama

Filler

Accent pieces that provide the bulk of texture and color in the container

Spiller

Plants that spill out of the pot, creating length and softening the edges of the container

USE QUALITY POTTING SOIL AND SLOW-RELEASE FERTILIZER.

We recommend G&B or Malibu Potting Soil and G&B Bud & Bloom Fertilizer

MIX IN EVERGREEN ACCENTS.

Great for year-round interest; simply swap out annual color (e.g. petunias in summer, pansies from fall through spring).

PREPARE FOR NEXT SEASON.

Plant bulbs such as daffodils and tulips in fall and winter containers for an extra pop of color in early spring.

CONSIDER THE DROP-IN APPROACH.

Pre-planted plastic pots can be easily set into decorative pots and quickly swapped out for a seasonal color refresh.
